Professional Summary

IoT Developer with hands-on experience in designing and developing smart automation and real-time monitoring systems using Arduino, ESP32, GSM, GPS, sensors, and cloud technologies. Skilled in embedded systems, sensor integration, wireless communication, and IoT-based application development. Developed multiple real-world projects including accident detection systems, vehicle tracking systems, weather monitoring platforms, and smart security solutions. Strong understanding of IoT architecture, cloud connectivity, debugging, and real-time data processing with a focus on building efficient and reliable smart systems.

Technical Skills

Languages: HTML5, CSS3, JavaScript, Python, SQL, Tailwind CSS, Bootstrap

Backend: Django, Flask, RESTful APIs

Databases: MySQL, MongoDB

IoT & Hardware: Arduino, ESP8266, ESP32, Raspberry Pi, Sensor Integration

Tools & Technologies: Git, GitHub, VS Code, Arduino IDE, MySQL Workbench, Android Studio, Figma

Core Concepts: DBMS, Software Engineering, Cloud Computing, Full-Stack Web Development

Experience

Robotics Teacher — Skill orbit India

2026 – Present

Agra, India

- Taught Robotics and IoT concepts using Arduino, sensors, and automation projects.
- Guided students in basic programming, circuit design, and robotics project development.
- Conducted practical sessions on embedded systems and sensor interfacing.

Experience

Academic Projects Experience — Dayalbagh Educational Institute

2023 – 2026

Agra, India

- Developed IoT-based projects using Arduino, ESP32, GSM, GPS, sensors, and cloud technology.
- Designed responsive web applications using HTML, CSS, JavaScript, Tailwind CSS, and Bootstrap.
- Worked on Django and MySQL integration for web-based project development.
- Gained practical knowledge of frontend development, IoT systems, cloud integration, and debugging through academic projects.

Projects

Accident Alert System — IoT Project

Arduino, ESP32, GPS, GSM, Cloud Technology

- Developed an IoT-based accident detection system that sends emergency alerts with live GPS location using GSM modules.
- Integrated vibration and accelerometer sensors for real-time accident detection and monitoring.

Weather Monitoring System — IoT Project

ESP32, DHT11 Sensor, Cloud Platform

- Built a real-time weather monitoring system to track temperature, humidity, and environmental conditions.
- Uploaded sensor data to cloud platforms for remote monitoring and analysis.

Smart Notice Board Using Cloud — IoT Project

ESP32, WiFi Module, Cloud Technology

- Created a wireless smart notice board for displaying real-time notices through cloud connectivity.
- Enabled remote message updates using mobile and web-based platforms.

Remote Control Smart Lock — IoT Project

ESP32, Servo Motor, RFID, Mobile Control

- Designed a smart lock system with remote access and authentication using RFID and mobile applications.
- Implemented IoT-based automation for improved security and remote monitoring.

Education

B.voc in internet of things

2023 – 2026

Dayalbagh Educational Institute

CGPA: 7.6 / 10.0
